

"A good system shortens the road to the goal, we provide that system"

SAFEWORKZONE

What is Safeworkzone?

Safeworkzone is a sealed barrier system which provides certified safe work areas using horizontal and vertical installations. It provides protection from dropped objects and allows work to be carried out at multiple levels and progress through challenging weather conditions.

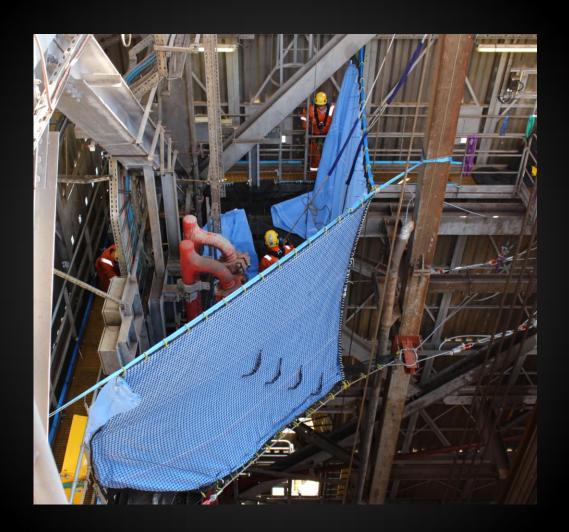

- Enables a safe work zone to be documented
- RFID control system for each item during certification, logistics and project management.
- Daily inspections of the installed system according to control procedures are carried out by certified personnel.
- Creates a stable work pace which aids in establishing a safe economic progress plan
- Multi-skilled personell

Safeworkzone saves time through faster installation, reduced storage space requirements and lower transport costs.

Specialist Training

Safety of personnel is a top priority

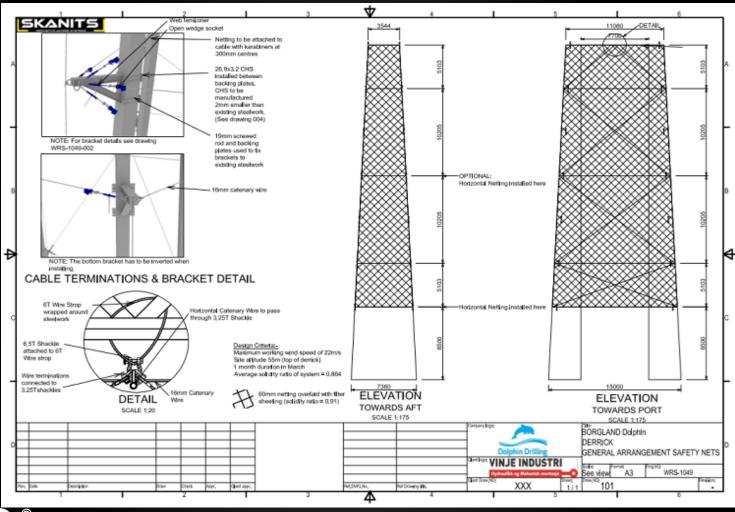

We provide training and simulation of the projects for our personnel to practice on promoting security in any situation they enter.

Our training department tests and prepares our personnel for challenges they may face on site .
