A SUPERIOR ENERGY SERVICES COMPANY

energy engineering

Subsea Dropped Object Analysis

Content

PROSPECT
A SUPERIOR ENERGY SERVICES COMPANY

- Company Background
- Subsea Dropped Objects
- Current Mitigation Techniques
- Subsea Installation Analysis
- Finite Element Analysis (FEA)
- Computational Fluid Dynamics (CFD)
- Case Studies
- Questions

Company Background

PROSPECT
A SUPERIOR ENERGY SERVICES COMPANY

- Founded 1999
 - Became part of Superior group Dec 2009
- Multidiscipline services
 - Design
 - Analysis
 - Management
- International Resources
 - Aberdeen, Derby, Houston, Singapore
- Client Orientated
 - Focus purely on client needs to provide a fast effective service of the highest quality

Subsea Dropped Objects

Subsea Asset Protection

PROSPECT
A SUPERIOR ENERGY SERVICES COMPANY

- Modern Oilfield
 - Large subsea infrastructure
- Congested seabed
 - High Risk of dropped objects impacting and damaging assets

Current Mitigation Techniques

PROSPECT
A SUPERIOR ENERGY SERVICES COMPANY

- DROPS potential consequence table
 - Lookup table for range of objects with potential to be dropped
 - Gives approximate drop cone, velocity and impact
- Recommended Practice
 - DNV-RP-F107 2010
 - Probability based quantification of events
 - Drag coefficients and terminal velocity highly generalised based on shape
- Explicit Analysis
 - Use of latest software and analysis techniques
 - Fully quantify numerical values and potential consequences

Prospect Dropped Object Analysis

Prospect Drop Analysis Tools

PROSPECT
A SUPERIOR ENERGY SERVICES COMPANY

Prospect can provide;

- Real world behaviour
 - Physics based simulations which replicate real events
- Numbers behind the risks
 - Mitigation methods can be tested and compared
- Worst case scenarios
 - Outcomes if the worst does happen
- Front end engineering
 - Prevent incidents rather than react

Subsea Installation Analysis

PROSPECT
A SUPERIOR ENERGY SERVICES COMPANY

- Simulate an asset during move from vessel to subsea location
 - Pipe Lay
 - Cable Lay
 - Subsea Hardware
 - Splash Zone Deployment

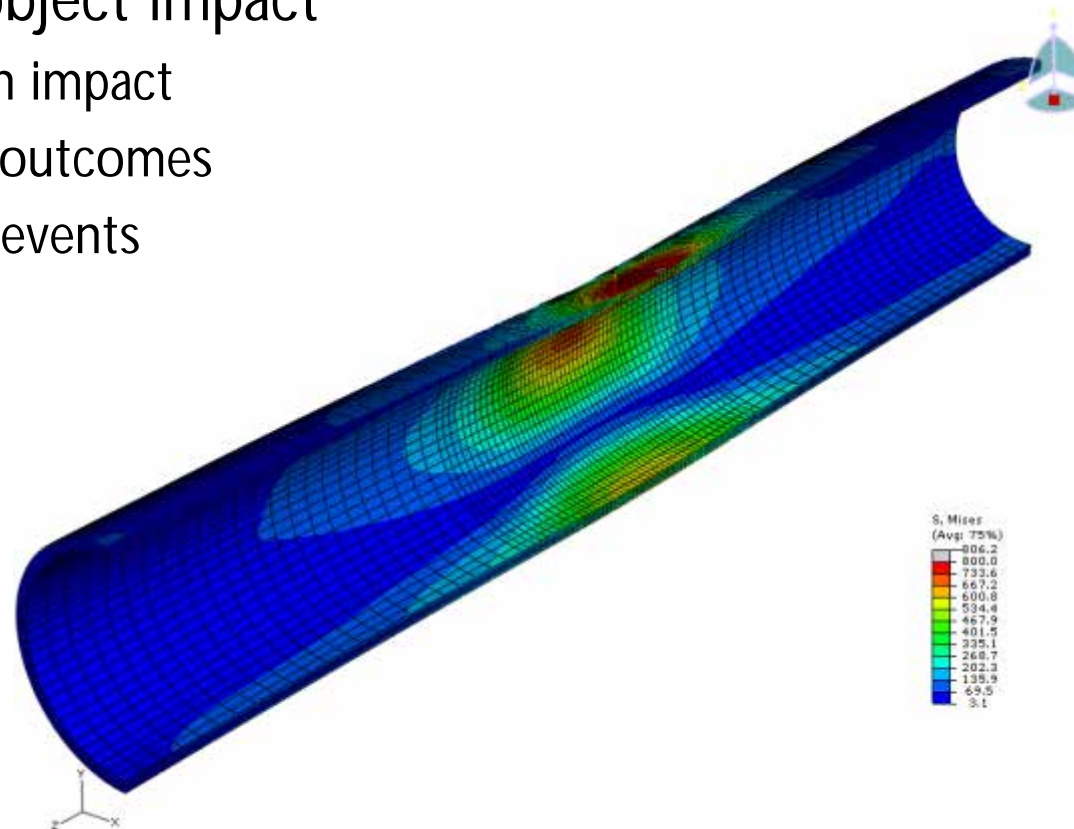

Finite Element Analysis (FEA)

PROSPECT
A SUPERIOR ENERGY SERVICES COMPANY

- Computer modelling of component stress and deflection
- Dropped object impact
 - Forces on impact
 - Visualise outcomes
 - Quantify events

- Computer modelling of fluid dynamics and subsequent loading
 - Determine where a dropped object is likely to land
 - “Virtual Wind Tunnel” for sea currents
 - Displacement forces
 - Objects drag coefficient
 - Determine an objects likely impact velocity

Case Studies

Dropped Object - Installation

PROSPECT
A SUPERIOR ENERGY SERVICES COMPANY

Flexible Riser Impact (FEA)

PROSPECT
A SUPERIOR ENERGY SERVICES COMPANY

Subsea Manifold Impact (FEA)
